

COMBINING SUPERIOR PROTECTION AND GREATER VALUE

The Studor System reacts instantaneously to any pressure changes, negative or positive, inside the DWV system to protect the water trap seals regardless of location thus preserving indoor air quality. Finally a VE system that goes beyond conventional designs in both savings and performance.

REDUCES

- Material
- Roof penetrations
- Core drillings
- Fire-stopping devices

DOES NOT REQUIRE

- Relief vent stacks
- Special fittings at each branch
- Pressure relief lines
- Special design or sizing
- Maintenance

ALLOWS

- Inexpensive future changes/additions
- Complex stack layouts
- Use on suds lines
- Submittal for additional LEED credits

Bring your engineering designs into the 21st Century, only with Studor – for over 30 years the recognized world leader in innovative DWV technology and products.
